

## **MATH S-Xab. Introduction to Functions and Calculus (CRN: 31530)**

*Thomas W. Judson PhD, Preceptor in Mathematics, Harvard University*

This course focuses on functions and their rates of change as these ideas appear in precalculus, differential calculus, and integral calculus. We emphasize the relations among symbolic, numerical, and graphical points of view throughout. Calculus techniques are motivated and illustrated by modeling problems in economics, biology, and other applications.
